

BREAKOUT SESSION 1	BREAKOUT SESSION 2	BREAKOUT SESSION 3
<p>Medicaid 2.0: The New Med-QUEST In the era of healthcare transformation, Medicaid programs are expected to be leaders in their own states' system-wide transformation effort. Locally, Medicaid expansion and IT modernization have made the State of Hawai'i Med-QUEST Division (MQD) a pivotal player in our healthcare transformation. Learn how MQD is expanding eligibility for its programs, upgrading its eligibility/enrollment system, and incorporating a series of innovations into its QUEST integration program.</p>	<p>Putting the Patient at the Center: Making PCMH Work in Hawai'i The patient-centered medical home (PCMH) approach holds great promise as a way to improve healthcare in Hawai'i by transforming how primary care is delivered and organized. Through a focus on coordinated, comprehensive care and greater access for patients, PCMH is gaining a strong foothold in Hawai'i as the preferred model. Providers and payers will share how and why PCMH has been successful for their practices and organizations.</p>	<p>Navigating the Labyrinth: Coordinating Care for Patients and the Community Medicine has so much accumulated information – being added to daily – that fragmentation and specialization have become serious problems. Patient-centered care requires a much greater focus on helping patients and their families understand the system and get their needs and preferences met. This panel discusses coordinating care throughout the entire spectrum of services, including home-based and end-of-life care.</p>
<p>Transforming Care by Utilizing Health Information Technology Health information technology (HIT) is the most indispensable tool to enable healthcare transformation. Effectively utilizing HIT is the key to quality improvement, cost management, and transparency. Without real-time, reliable information, our healthcare system cannot move toward accountability and integration. Find out what the healthcare industry is doing to accelerate HIT adoption and utilization at hospitals and provider practices to fast-track system-wide transformation.</p>	<p>Bridging the Gap: Integrating Behavioral Health Services One of the major contributors to health and cost issues is the lack of adequate behavioral health services – mental health, chemical dependency treatment, and programs to address such behaviors. Transformation demands a recognition and integration of behavioral health with physical care and increased access to timely support and intervention. Hear from experts about the need for change and how such interventions will improve population health.</p>	<p>Redesigning the Healthcare Workforce of Tomorrow Like many states, Hawai'i is facing a physician shortage, especially in rural communities. New models of care emphasize a team approach to provide timely and appropriate access for patients, improve care coordination and case management and implement support for administrative and health IT needs. Hear about how health career training programs and institutions are adapting and incorporating these changes to better prepare tomorrow's workforce.</p>
<p>Best Practices in Employee Health and Wellness Programs Better health and sustainability depend on assisting employees with healthier habits. Worksite wellness programs bring clear benefits for the employer – insurance premium stability and a mentally and physically healthy workforce, with reduced absenteeism and increased productivity. Come learn from representatives of small, medium and large businesses about their best practices and the tangible results they have seen since instituting their programs.</p>	<p>Strengthening the Safety Net: How FQHCs are Transforming Care in Underserved Areas Underserved communities are much more likely to have poor health and barriers to care. Federally Qualified Health Centers (FQHCs) in these communities utilize many effective models that can be incorporated into our statewide healthcare transformation efforts, such as integrated behavioral health services, dental care, care coordination and case management, outreach, and community wellness programs. Learn how FQHCs are expanding and transforming care to improve health in their communities.</p>	<p>Overcoming Challenges Facing Rural and Neighbor Island Communities Unlike any other state in the United States, Hawai'i has unique access and resource distribution challenges due to our island geography. Rural hospitals and community health centers are finding ways to continue to meet their communities' special needs in changing times. Hear how these organizations on Lāna'i, Kaua'i and Hawai'i Island are overcoming such challenges and transforming care in their own right.</p>
<p>Addressing Healthcare Disparities of Native Hawaiian and Pacific Islanders Kanaka Maoli, Hawai'i's indigenous population, and other Pacific Islanders experience some of the greatest inequities in health status in our state. In this era of healthcare transformation, what is being done to address these disparities? The Office of Hawaiian Affairs, The Queen's Health Systems and JABSOM will share the steps they are taking to identify challenges and make an impact where the need is greatest.</p>	<p>What's More Important: Your Zip Code or Genetic Code? A Discussion on Social Determinants of Health Good health depends upon much more than a competent healthcare system. As the linkage between health status and much larger issues – such as poverty, education and environment – becomes more apparent, transformation demands broader policy considerations. Come learn what the Department of Health is doing to address this issue and how the Federal Reserve Bank is changing how it looks at and invests in health.</p>	<p>A Vision of Accountable Care Systems in Hawai'i Our largest healthcare institutions are moving toward a model of integrated care that is accountable for quality, outcomes, and cost-effectiveness. Learn how HMSA, Kaiser Permanente, The Queen's Health Systems and Hawai'i Pacific Health are implementing their vision for a transformed system inspired by the Triple Aim of better health, better care and lower costs.</p>
